Can work remote:	Yes
Can work abroad:	Yes

About me

I started working in restaurants and construction at the age of 13. Thanks to my father, I had a general knowledge of electricity and was introduced to computers, becoming a technician. During this period, I delved into robot technologies, learned about electronics, and coded my own robots. Before long, I began to succeed in the field of software, and it became my profession. I decided on what I personally enjoyed doing, which was front-end design, and continued to improve myself in that area.

My hobbies include watching Netflix, meeting up with friends, and sketching models that I like. I usually enjoy coding by myself until I get bored.

Experience

2023 — Senior frontend developer
WASK

I started working in a full-time position in the Turkey region for this organization that provides services in the field of online advertising. I work on the landing page and internal product developments. I am developing the front-end of a product focused on artificial intelligence.

2021 — Frontend developer
Async Group

My first abroad experience took place here, in Ukraine. However, since I was at a company in Ukraine where the primary language was English, I couldn't improve my skills in Russian. Using web technologies, I quickly produced fast sportsbook solutions. This experience answered my critical questions about the challenges of living in a foreign country.

2020 — Frontend developer
Furthersoft

At this company, there was a deep workflow that allowed me to progress further on Socket.js and Vue.js. With this company, I was able to develop my skills more with long shifts. Working more than full-time had a significant impact on improving my skills in a short time. It was an intense but enjoyable process for me.

2019 — Frontend developer
Fixnex Broadband

While working with Fixnet, I gained experience in Vue.js and jQuery. For the first time, I also took on a role in interface design here. My design works, which were previously for hobby purposes, began to be used in a product that would be published for the first time here. Thanks to the very positive and helpful team, I learned a lot.

Education

2019 — Computer engineering (not completed)
Eastern Mediterranean University

2017 — Computer programing (not completed)
Eastern Mediterranean University

Honour project

Adapass
North Cyprus covid-19 application portal
2022

Start-up's & projects

2023

i-mess

Tedavi technology

It was always my dream to make a contact with the industry devices that I watched fondly at night. Working with them and accelerating a part of the production in this field with software has always excited me. Of course, I realized my dream with a company that provides professional consultancy in this field. First I learned the industry standards and then I created the project. In this project, I had the opportunity to work with previously engineered cnc devices and production robots.

xyemek

Oncutech technology

xyemek is an initiative focused on leaving a building block of myself on the island where I have lived for a long time, and providing a more affordable and higher campaign meal order service under the conditions of the island. For the first time, measuring the movements of the user group and seeing how the codes I wrote affect people's lives added a vision to me.

2022

2021

Sia nft project

Spirit is art

For a long time, we worked with a huge team on the NFT project, which is a new technology. We published an nft project with our research. This project has made me knowledgable on blockchain. I had the opportunity to learn opensea, blockchain wallets, Coins, Rarity, minting - lazy mint and blockchain working principles.

2019

Smart home automation

Asvalya

It is electricity that made me meet with software. My adventure that started with electricity continued with electronics. After establishing my dream tony stark house, I realized that it could become a corporate product and that there were not enough initiatives in this area, I made an attempt on smart home. I decided to produce my own product in this field and continue selling with 3rd party products. After about 2 years, I decided to move forward in the software field by selling my venture here.
